

SATCOM 101

Aeronautical satellite communications (SATCOM) familiarization course

This course provides a “big picture” perspective to an audience who has some familiarity with Inmarsat but desires to dig deeper into the critical elements: terrestrial, space, mobile platforms, and how they interact.

From the history and evolution of Inmarsat to their latest generation of services, this course brings the operator, maintenance tech or planner up-to-date, dispels myths, and provides a wealth of useful information, tactics, techniques, and troubleshooting tips and tools. We guarantee you will leave with a higher level of situational awareness.

Who should attend?

- Operators
- Maintainers
- Planners

Locations:

- Herndon, Virginia
- Your location
 - The course is free with the exception of expenses and airfare.

Delivering satellite communications solutions to ensure U.S. Government mission success

Satcom Direct Communications (SDC) provides U.S. Government users with aeronautical, land-mobile and maritime Inmarsat, Iridium and Ku-band services, along with customized support within a MAC III, Information Assurance compliant architecture.

The course directors have over 30 years of experience with aeronautical Inmarsat in an operational environment and bring a unique perspective to the forefront.
