Overseeing a flight department is complicated. Privacy, tax administration, regulatory compliance and risk management are all of paramount importance and not understanding them can lead your company into a very complex and grey world.

SD Managed Services Aviation Tax and Compliance Services (ATACS) helps organizations manage tax reporting requirements and the regulations imposed by the FAA, IRS and SEC. These three government entities all have diverse rules on the personal use of corporate aircraft due to their different missions. Our job is to assure that your personal use is reported properly. Done improperly, penalties and fines can add up, but more importantly, the damage that negative media exposure can create far exceeds any monetary penalty.

"SD Managed Services has serviced our account for the past 7 years and we are completely satisfied with their services. They are true professionals and they provide us with the latest in consultant services as well as peace of mind that we are always in compliance with the emerging trends of the Business Aircraft industry."
*Project Manager,
Fortune 100 Company*

OUR APPROACH

We understand taxes. We understand regulations. We understand the FAA, IRS and SEC. Most importantly, we understand the world of aviation. The journey begins by understanding your business needs thoroughly. Our team gets 'under the hood' with an on-site implementation. We customize your process maps and develop guidelines specifically tailored to your organization, after carefully analyzing company data flows and practices. We will then personalize your expectations for results and reporting, keeping in mind that continuity in business practices will never be lost and can be passed on easily.
