

SD Cabin

The Power of One

SD Cabin consolidates the four primary SD passenger and troubleshooting mobile apps into one functional experience!

SDR | MATA | MYFLIGHT | YONDER TOOLKIT

This allows for a simplified path to utilizing multiple services in a single application via a new and improved interface.

SD Cabin includes real-time flight tracking, WiFi connectivity diagnostics, hardware analysis and technical support features. See your trip route using an interactive map, monitor onboard network systems, identify connected devices, perform network scans and more.

All you need is an active WiFi connection to the Satcom Direct Router (SDR)/SDR Gateway or SD WiFi/LTE Hub. No subscription is necessary.

WHATS NEW:

- 'Easy Scan' performs a multiple network test with a single click
- Built in Speed tests measure network performance
- Displays multiple connectivity coverage maps (including FlexExec and the Inmarsat JX spotbeam map) and shows speed, altitude, as well as devices connected to your network
- Displays contact information for the closest Field Service Engineer

See the Apple App Store to download the SD Cabin App for your Apple iPad, iPhone or iPad Mini (requires iOS 10.3 or newer)
