

## Satcom Direct Release Notes

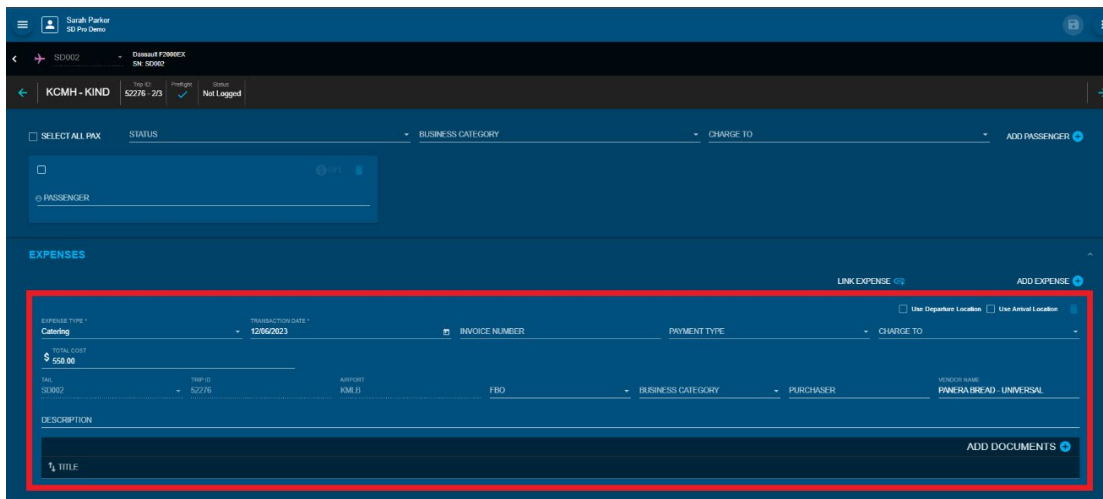

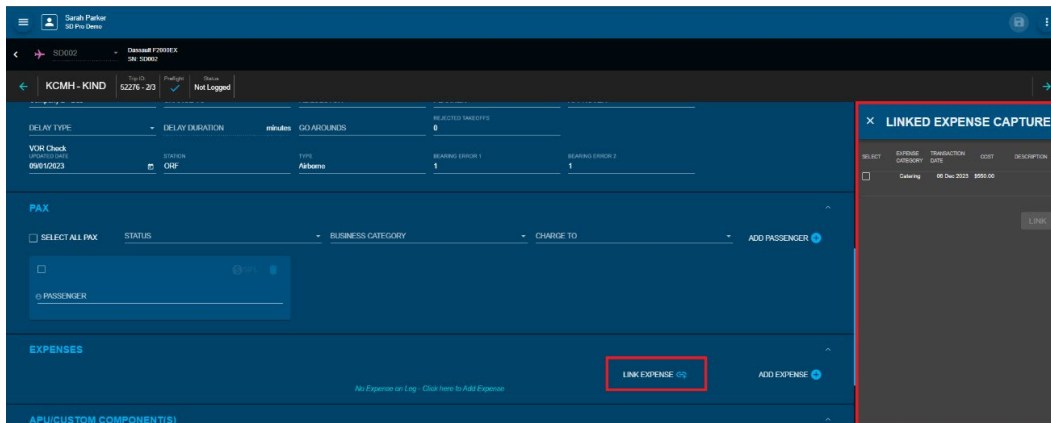

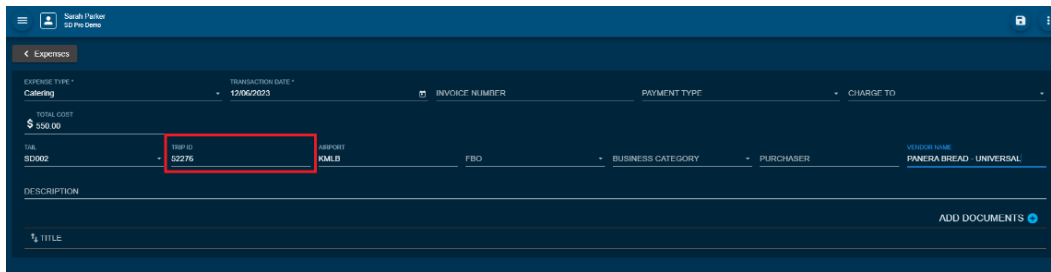

The Preflight and Postflight product allows part 91 flight operations to schedule, log, and report on operational, financial, and staff related data. Users have requested the ability to track crew currency by block time instead of flight time and improvements to the document upload process.

### Change History

Version	Software	Previous Change	Implemented	Change
1.4	Preflight and Postflight	Ver 1.3	November 29 2023	Expense Capture Enhancements, Aircraft and Staff Events File Upload, APIS Integration Credentials, Staff Calendar Crew Metrics, Support Everest Fuel CSV Updates, Postflight Header, SIFL Charges By Host Report Enhancements
1.3	Preflight and Postflight	Ver 1.2	Oct 24 2023	Document Upload Enhancements, filing APIS using Sender ID, SIFL Grouping Calculations, and Reporting enhancements
1.2	Preflight and Postflight	Ver 1.1	Oct 12 2023	Document Management and Reporting enhancements
1.1	Preflight and Postflight	Ver 1.0	Sept 26 2023	Vendor selection for expense capture, Company Profile Flight Hour Preference, July-December 2023 SIFL Rates
1.0	Preflight and Postflight	Initial Version	Template	Initial Release Note Template

## New Features

- Expense Capture Enhancements have been implemented to allow users to enter trip expenses before the date of travel. Users can accomplish this by inputting the expense using PostFlight expense capture and adding the preflight Trip ID before saving. If the preflight trip ID is saved on the expense capture record, the user can easily associate the expense with the leg they are logging. To do so, the user should select 'Link Expense,' and all expense capture records with the associated Trip ID will be listed for selection and addition to the leg being logged.

- Document upload functionality has been added to Aircraft and Staff Event modals to allow files associated with Aircraft and Staff Events to be attached to the event on the event details tab.

- The date range selection and filter for Staff Calendar Crew Metrics have been relocated to the expanded header of the staff calendar, aligning with other calendar filters. The start and end date fields for crew metrics will no longer automatically reload the page upon populating each date field. Instead, users are now required to manually select the reload icon to trigger the reload of crew metrics based on the newly entered date range.

- Everest Fuel now supports product specifications within their fuel price csv file that provide to their customers. We have made updates to our fuel price upload tool to support this new file format that Everest is supporting with the new "Product" column.
- Remove active/inactive filter from Postflight Header and display all tails within the tail drop-down menu. The Tail drop-down menu will show all active tails based on the tail order set on the company profile, followed by the deactivated tails displaying in alphabetical order with an \*asterisk indicator at the end of the tail.

## New/Updated Reports:

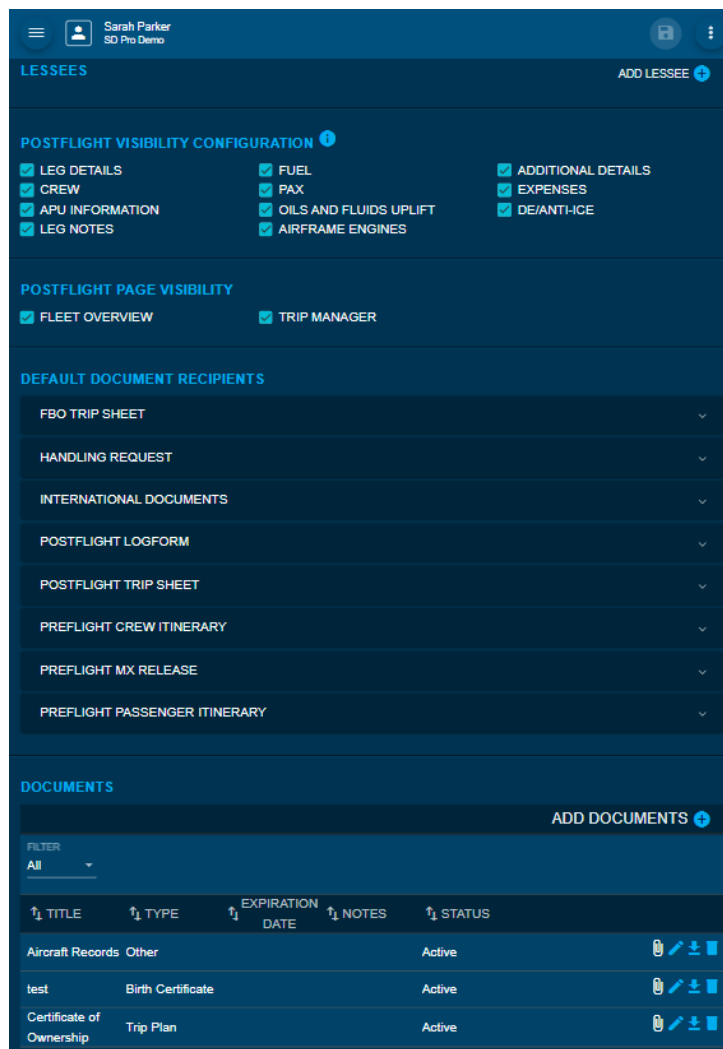

- SIFL Charges by Host report enhancements to sort the passenger names alphabetically

## Resolved Issues

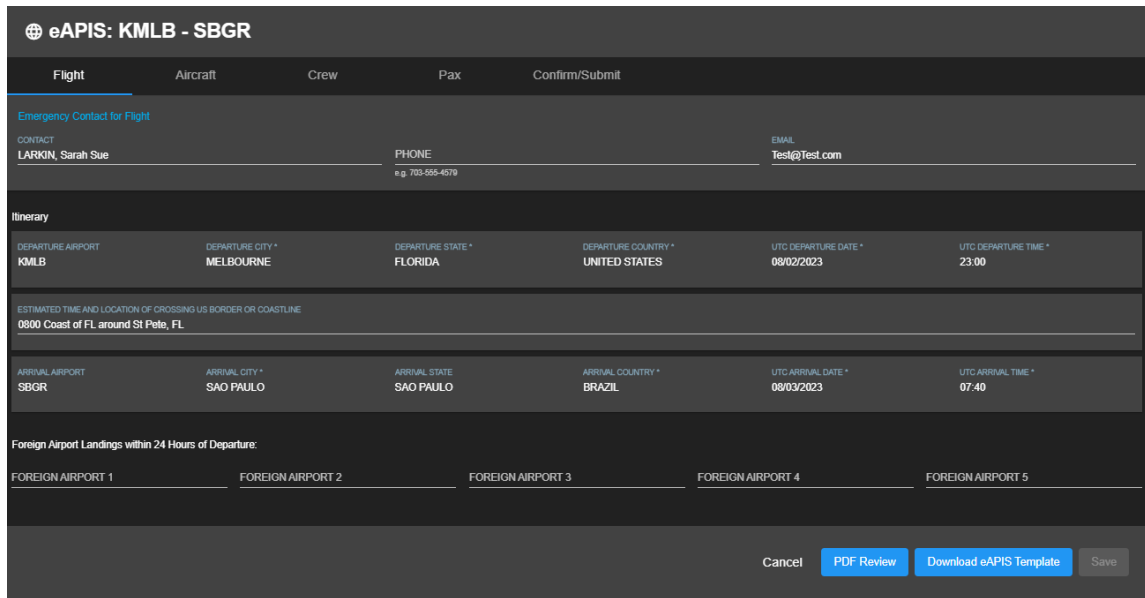

- Special characters were not initially supported in the type-ahead search on the airport profile. This issue has been resolved by allowing the entry of special characters in the type-ahead search without any additional text or characters. As a result, the search now returns matching results that include the specified special characters. For example, entering '&' in the search will return results for any airport with '&' in its name.

- Document Attachment icons do not appear in document table when viewing on mobile devices. This issue was resolved by implementing logic for the page to resize to fit on the device screen.

- APIS required both email and phone contact information as mandatory fields before allowing users to submit APIS. However, since CBP only requires either email or phone information for emergency contact, the fields have been modified. Now, the fields will not be triggered as required if the user has populated at least one of the emergency contact fields, whether it's for email or phone. The validation check performed when attempting to submit APIS has been updated to only require one type of emergency contact to be populated for the APIS submission to be active and available for the user to select.
